In 2018, **Trinidad and Tobago's** total wealth per person reached **118** thousand US dollars, a change of **54** percent. Figure 2 shows **Trinidad and Tobago's** total wealth per capita compared to other neighbor countries in the **Latin America and Caribbean** region ordered from the country with the highest wealth per capita to the country with the smallest.

Composition of total wealth

Trinidad and Tobago's wealth is composed by natural, human and produced capital. Natural capital comprises renewable assets including forests, mangroves, fisheries, land, and nonrenewable assets including fossil fuels, metals and minerals. **Trinidad and Tobago's** natural capital reached **21** billion US dollars, **12.7** percent the size of its total wealth.

Human capital estimates the the present value of expected future earnings of the labor force employed and self-employed. It's human capital was worth **113** billion US dollars, which represents **69.2** percent of its total wealth.

Finally, produced capital measures the sum of investment minus normal depreciation, including assets such as machinery, buildings, equipment, and intangible wealth like intellectual property and mineral exploration. **Trinidad and Tobago's** produced capital reached a total of **21** billion US dollars, a **19.1** percent of **Trinidad and Tobago's** total wealth.

Wealth indicators over time

Trinidad and Tobago's wealth components have changed over time as well. Figures 3 and 4 show how **Trinidad and Tobago's** total and per capita main wealth indicators have changed since 1995. Figures 5 and 6 show how these same total and per capita indicators have changed rebasing them with their values in 1995. When a line goes up it means there have been substantial investments to that type of capital.

Natural capital

Natural capital is a vital part of **Trinidad and Tobago's** total wealth. Its renewable natural capital – comprising croplands, forests, mangroves, protected areas, and fisheries – are directly linked to the environment. Nonrenewable natural capital – including oil, gas, coal, metals, and minerals – have created several challenges to countries facing natural resource dependence, depletion and price volatility. Figures 7 and 8 compare **Trinidad and Tobago's** renewable and nonrenewable natural capital by year. Figures 9 and 10 show the same assets over time but indexed to 1995 values.

Human capital

Human capital is estimated as the present value of expected future earning for the labor force, employed and self employed. This wealth indicator can also be broken down into female and male human capital, revealing gender inequalities within a country. Figure 15 show how **Trinidad and Tobago's** human capital subcomponents have changed since 1995 and the distribution by gender.
